

PATIENT PRESENTING CLINICAL SIGNS

Dalayla Wiedman History: Repeat CT scan-excretory urography-r/o ectopic ureter, multiple post contrast studies performed today

SPECIES Abnormal PE/Chem/CBC/UA Results:

Canine

COMPUTED TOMOGRAPHIC STUDY OF THE ABDOMEN

A high-resolution excretory urography CT study of the abdomen is provided for review.

BREED

French Bulldog

COMPUTED TOMOGRAPHIC FINDINGS

Both kidney presents stationary findings with a small volume of the left kidney and serrating margins of both kidneys. The contrast enhancement pattern of both kidney is irregular. A bilateral symmetric pyelogram is visible.

SEX

Intact Female

Both ureters are visualized, and the vesicoureteral junction is approximately 10 mm cranial to the vesicourethral junction. No contrast is appreciated in the urethra.

AGE

6 Months

COMPUTED TOMOGRAPHIC DIAGNOSIS

- No evidence of ureteral ectopia
- Bilateral chronic nephropathy
- Asymmetric lumbosacral transitional vertebra

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

HOSPITAL NAME

Blairstown AH

The CT is negative for ureteral ectopia. Theoretically an intramural ectopic ureter cannot be ruled out entirely. In case of strong clinical suspicion further workup by means of cystoscopy should be considered.

REFERRING VET

Dr. Lovell

Other underlying causes – such as urinary bladder/lower sphincter dyssynergia, behavioral problems, juvenile incontinence, PU/PD – need to be considered as well.
