

PATIENT

Brie Smith

PRESENTING CLINICAL SIGNS

sudden onset of yelping , acting different , lethargic
Abnormal PE/Chem/CBC/UA Results: Left>right patellar luxation , clicking sound around the left knee with moderate discomfort , pooped very dry stool during taking the radiographs, blood work indicated dehydration.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE PELVIS AND STIFLE JOINTS

Radiographs of the pelvis and the stifle joints in two orthogonal imaging planes are provided for review.

BREED

Yorkshire Terrier

RADIOGRAPHIC FINDINGS

The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

SEX

Female Spayed

The patella of the left stifle joint is superimposed on the soft tissues medial to the medial femoral condyle. The patella of the right stifle joint is in situ.

Both stifle joints present smooth osseous margins and without signs of intracapsular swelling.

AGE

2 Years

RADIOGRAPHIC DIAGNOSIS

- Left sided medial patellar luxation
- Normal pelvis and coxofemoral joints

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The main finding is the medial patellar luxation of the left stifle joint. No additional clinically relevant abnormalities are appreciated in the current radiographic study of the pelvis and the stifle joints.
