SPECIES Abnormal PE/Chem/CBC/UA Results: CV/Respiratory: Normal heart rate and rhythm, no murmur, pulses strong and synchronous, normal bronchovesicular sounds. EENT: Clear OU and AU. No nasal discharge. No cough on tracheal palpation. Oral cavity: Not examined- muzzled
Canine Musculoskeletal: BCS = 5/9. Ambulatory x 4 Uro/Perineum: Intact female, no heat cycle yet
BREED Abd/GI: SI tense, painful on mid-abdominal palpation. No obvious masses or fluid wave palpated
Belgian Malinois Lymph Nodes: No peripheral lymphadenopathy Neurological: Alert and appropriate. No significant abnormalities Skin: Good hair coat. No ectoparasites seen Mentation: BAR, very nervous Hydration: < 5% dehydration Rectal: No masses, normal stool, no bleeding Fecal: Not performed today Diagnostic Testing Needed: Thoracic/abdominal radiographs, CBC/CHEM/ELECT Declined Diagnostics/Treatments: Bloodwork Findings: Radiographs:

SEX Consult pending Assessment: Acute vomiting: r/o dietary indiscretion vs. pancreatitis vs. Addison's disease vs. infectious (parasites, bacteria, viral vs. other) vs. other Pruritus (worse after eating): r/o food allergy vs. other
Female

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

AGE A complete set of radiographs of the thorax and abdomen is provided for review.
9 Months

RADIOGRAPHIC FINDINGS

INTERPRETED BY

Thorax

Sebastian Schaub, DVM
 Dr. med. vet. DipECVDI

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

HOSPITAL NAME

DPC Veterinary Hospital

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

REFERRING VET

Dr. Rivera

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INVOICE

54789

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

DATE

10-24-22

Abdomen

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

PATIENT

Layka Zelaya

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

SPECIES

Canine

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

BREED

Belgian Malinois

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

SEX

Female

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
- Normal abdomen

AGE

9 Months

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen presents without abnormalities. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction.
