

PATIENT PRESENTING CLINICAL SIGNS

Matilda Welch History: Sore in front end
 Abnormal PE/Chem/CBC/UA Results:

SPECIES RADIOGRAPHIC STUDY OF THE SHOULDER JOINTS

Canine Radiographs of the shoulder joints in a mediolateral projection are provided for review.

BREED RADIOGRAPHIC FINDINGS

Bloodhound The subchondral bone at the caudal aspect of the humeral head bilaterally, presents an irregular marginated crescent shaped defect. In the right shoulder joint the defect is covered by a thin mineralized lamella. The surrounding soft tissue structures are within normal limits.

SEX RADIOGRAPHIC DIAGNOSIS

Intact Female
 • Osteochondrosis dissecans (OCD) shoulder joints bilaterally

AGE INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

9 Months The findings are consistent with OCD of both shoulder joints. Consider arthroscopy/arthrotomy to revise the OCD defect.
