

PATIENT PRESENTING CLINICAL SIGNS

Coco Salas P had a fever couple days ago P has a low appetite and barely any stool since yesterday O have revolution a few days ago, Pet had tapeworms in his stool

SPECIES RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN

Feline A complete set of radiographs of the thorax and abdomen is provided for review.

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

The vertebral endplates T13/L1, L6/L7 and L7/S1 present mild ventral spondylosis formation.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

**PATIENT**

Coco Salas

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

SPECIES

Feline

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
- Normal abdomen but mild spondylosis formation

BREED

Domestic Short Hair

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The current set of radiographs of the thorax and abdomen presents without clinically relevant abnormalities. If not done so yet, recommend complementing workup by complete blood work including fpl.
