

**PATIENT**

Oliver Tally

**PRESENTING CLINICAL SIGNS**

3 series of rads sent- initially seen on 9/11 for wheezing at rest/when sleeping- abnormal right mid thoracic auscultation- wheeze at that time. Treated with Doxycycline and Panacur. Since then dog has had 2 more series of radiographs - wheezing has resolved and has progressed to a more hacking cough. Dog afebrile, BAR, heart and lungs auscult WNL on most recent exam, eating well, on consistent heartworm preventative.

**SPECIES**

Canine

Abnormal PE/Chem/CBC/UA Results:

**BREED**

Goldendoodle

**RADIOGRAPHIC STUDY OF THE THORAX**

A consecutive radiographic study of the thorax is provided for review, images are dated 9/11/21, 10/11/21 and 10/26/21

**RADIOGRAPHIC FINDINGS**

**SEX**

NM

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

**AGE**

9.5 Years

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**HOSPITAL NAME**

Summit Dog & Cat  
Hospital

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

**REFERRING VET**

Levitan

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

No changes are appreciated between the consecutive series.

**INVOICE**

48005

**RADIOGRAPHIC DIAGNOSIS**

- Normal thorax in all radiographic studies

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**DATE**

10-26-21

The radiographic studies of the thorax present no abnormalities, explaining the clinical signs. However, normal radiographs do not rule out bronchitis completely. In case of doubt, bronchoscopy including BAL can be considered as advanced diagnostic test.

**PATIENT**

Oliver Tally

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

**SPECIES**

Canine

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
