

PATIENT

Hunter Ermentraut

PRESENTING CLINICAL SIGNS

mid abdominal loss of detail. Concern for pancreatitis.
 Abnormal PE/Chem/CBC/UA Results: Mucous Membranes Pink, TACKY, CRT <2 seconds
 Hydration MILD DEHYDRATION based on mucous membranes and skin turgor. Abdomen MILD DISCOMFORT, no masses, no organomegaly. Rectal examination not performed. Chem 17 and CBC -normal CPL – Pending

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

BREED

Labrador Retriever

Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

Mild motion blurring of the abdomen is present.

SEX

The surrounding bony structures are within normal limits.

FS

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

AGE

6 Years, 8 Months

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INTERPRETED BY

Sebastian Schaub, DVM
 Dr. med. vet. DipECVDI

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

Elizabeth Animal Hospital

The stomach is in its anticipated position and empty.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

REFERRING VET

Leon Anderson, DVM

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

- Normal abdomen

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

DATE

10-27-21

The radiographic study presents without abnormalities. There is mild motion artefact, causing blurring of the cranial abdominal detail. However, normal radiographs do not rule out potential pancreatitis.

PATIENT

Hunter Ermentraut

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

SPECIES

Canine

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
