

**PRESENTING CLINICAL SIGNS**

**PATIENT**

Junior Villamarzo

History: Doing well, no vomiting, urinating ok, drinking a lot (which is normal), bean size stools but 2 days ago was a normal amount eating a little more licks gravy, eats treats meds are all done.  
Abnormal PE/Chem/CBC/UA Results:

**SPECIES**

Feline

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

Radiographs of the abdomen in two imaging planes are provided for review.

**BREED**

DSH

**RADIOGRAPHIC FINDINGS**

The intervertebral disc space L7/S1 is collapsed, and the subchondral bone of the respective vertebral endplates presents a moderate sclerosis and spondylosis formation.

**SEX**

Neutered Male

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

**AGE**

14 Years

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**INTERPRETED BY**

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

**RADIOGRAPHIC DIAGNOSIS**

- Normal abdomen but evidence of chronic discopathy L7/S1

**REFERRING VET**

Dr. Kristin Hellwarth

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study of the abdomen presents without clinically relevant abnormalities. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If not done so yet, recommend complementing workup by complete blood work. If clinical signs persist, consider an abdominal ultrasound examination for further evaluation of the abdominal organs.
