

**PATIENT PRESENTING CLINICAL SIGNS**

**PATIENT** Pebbles Green **PRESENTING CLINICAL SIGNS** History: Not eating or drinking for 2 days. Painful on touching the back. No history of falling as per Owner.

**SPECIES** Abnormal PE/Chem/CBC/UA Results: Pain around lumbosacral area and tense abdomen. Bloodwork unremarkable and negative cpl.

Canine

**RADIOGRAPHIC STUDY OF THE ABDOMEN & PELVIS**

**BREED** Radiographs of the abdomen in three imaging planes are provided for review.

Yorshire Terrier

**RADIOGRAPHIC FINDINGS**

**SEX**

The surrounding bony structures – including the lumbar spine and pelvis – are within normal limits. The coxofemoral joints bilaterally are congruent. The right coxofemoral joint presents mild osteophyte new bone formation.

Spayed Female

**AGE**

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

10 Years

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

**INTERPRETED BY**

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**HOSPITAL NAME**

The stomach is in its anticipated position and empty.

Truscott AH

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

**REFERRING VET**

The colon is seen in the expected position and empty.

Erini Abraham

**RADIOGRAPHIC DIAGNOSIS**

**INVOICE**

- Empty gastrointestinal tract
- Mild degenerative osteoarthritis right coxofemoral joint

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**DATE**

10/29/21

**PATIENT**

Pebbles Green

The radiographic study is negative for clinically relevant pathology. The empty gastrointestinal tract is a sequela to the history of hyporexia. If there is strong suspicion for compressive myelopathy and if neurological clinical signs develop, cross-sectional imaging is recommended.
