

**PATIENT PRESENTING CLINICAL SIGNS**

**Captain Carter** History: O states that p was on floor this morning shaking which is not normal. P has occasional limp on left front leg from previous draining and scraping. P is still active at home and is e/d well and no v/d. P does have a small bump on the dorsal aspect of the right front wrist (per O has been there since he had a surgery done on it).

**SPECIES**

Canine Abnormal PE/Chem/CBC/UA Results:

**BREED**

Labrador A high resolution pre- and post-contrast CT study of the front limbs is provided for review.

**COMPUTED TOMOGRAPHIC STUDY OF THE FRONT LIMBS**

**COMPUTED TOMOGRAPHIC FINDINGS**

**SEX**

RIGHT AND LEFT APPEAR TO BE FLIPPED – recheck patient positioning and CT machine settings.

**Male**

In the pictured parts of the intertubercular sulcus of the shoulder joints, moderate exostosis formation is noted bilaterally.

**AGE**

**8 Years**

The periarticular osseous structures of the right elbow joint present moderate osteophyte new bone formation. The medial coronoid process of the right elbow joint has a hook shaped conformation with a generalized moderate sclerosis.

**INTERPRETED BY**

The left elbow joint shows no overt abnormalities.

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

The distal aspects of both front limbs are overexposed, burning out the surrounding soft tissue structures and multiple streak artefacts are present. The osseous structures of the antebrachium/front paws presents without abnormalities.

**HOSPITAL NAME**

Animal MC of Mt.  
Pleasant

**COMPUTED TOMOGRAPHIC DIAGNOSIS**

- Degenerative osteoarthritis right elbow joint due to pathology of the medial coronoid process
- Spondylosis deformans C2/C3
- Exostosis formation sulcus intertubercularis shoulder joints bilaterally (can be due to pathology of the bicipital tendon)
- Structural normal brain

**REFERRING VET**

Tess Lawhon, DVM

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The findings of the left elbow joint are compatible with disease of the medial coronoid process (e.g. non-vital tip) with secondary degenerative osteoarthritis of the right elbow joint.

**INVOICE**

13596

Unfortunately evaluation of the distal aspects of the front limbs is very limited by the overexposure and streak artefacts.
