

PRESENTING CLINICAL SIGNS

PATIENT

Maisy Tuckette

History: Hx of suspected hypothyroidism. Was treated and then taken off supplementation by previous vet. Owner also reports that they are concerned about respiratory stridor that Maisy exhibits. Later owner stated that Maisy's last estrus was August 15-Sept 5. She had an infection afterwards and has not returned to normal

SPECIES

Canine

Abnormal PE/Chem/CBC/UA Results: TPR - WNL Bloodwork pending Abdominal ultrasound - interpretation pending BCS 8/9

BREED

Cocker Spaniel

RADIOGRAPHIC STUDY OF THE CERVICAL SPINE AND THORAX

Radiographs of the cervical spine and the thorax are provided for review.

RADIOGRAPHIC FINDINGS

SEX

Neck

Female

The lateral projection of the cervical spine is moderately rotated. The osseous and soft tissue structures present no abnormalities.

AGE

Thorax

2.5 Years

The patient presents with an obese body condition.

The surrounding bony structures are within normal limits.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

HOSPITAL NAME

Torch Lake VC

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

REFERRING VET

Adrienne Waffle

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INVOICE

13586

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

DATE

10/6/21

PATIENT

Maisy Tuckette

- Obesity
- Normal neck
- Normal thorax

SPECIES

Canine

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The main finding is the obesity of the patient, no additional abnormalities are noted, explaining the described clinical signs. Weight management appears beneficial as well as testing of T4 levels to rule out neuropathy as source for laryngeal paralysis explaining the described airway noise.

BREED

Cocker Spaniel

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

SEX

Female

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
