

**PATIENT PRESENTING CLINICAL SIGNS**

**PATIENT** Paisley Mass  
**SPECIES** History: Patient presented for dental cleaning, pre-anesthetic radiographs taken, no abnormalities found(case previously submitted (10/4/21) Recovery uneventful. Pet was discharged 3 hours after, on the way home, patient became dyspneic, returned, place on oxygen, aggressive supportive care. Xrays attached taken on presentation. Referred to Emergency clinic. Stabilization was unsuccessful, pet was euthanized due to rapid decline.

Canine  
 Abnormal PE/Chem/CBC/UA Results:

**BREED RADIOGRAPHIC STUDY OF THE THORAX**

Dachshund A complete set of radiographs of the thorax is provide for review. Image are dated 11/10/20.

**RADIOGRAPHIC FINDINGS**

**SEX** Neutered Male  
 The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement.  
 The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**AGE** 10 Years  
 The lung parenchyma presents a generalized moderate to marked soft tissue opacification, most accentuated of the right lung lobes with air-bronchograms. The right lung lobes present a moderately reduced volume and a midline shift of the heart to the right is seen. The pulmonary pattern is effacing the pulmonary vasculature. The left lung lobe presents a moderate to marked unstructured reticular pattern with maintained volume.

**INTERPRETED BY**

Sebastian Schaub, DVM Dr. med. vet. DipECVDI  
 The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**HOSPITAL NAME** The stomach is moderately distended by gas.

**RADIOGRAPHIC DIAGNOSIS**

- Generalized moderate to marked unstructured interstitial to alveolar pattern
- Aerophagia

**REFERRING VET**

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Sunset AH  
 The findings are compatible with non-cardiogenic pulmonary edema and given the history of preceding anesthesia the most likely underlying causes are delayed drug reaction, negative pressure pulmonary edema, acute respiratory distress syndrome, aspiration.
