

**PATIENT PRESENTING CLINICAL SIGNS**

Marley Wunderlich History: limping on left hind  
 Abnormal PE/Chem/CBC/UA Results: bw is unremarkable.

**SPECIES RADIOGRAPHIC STUDY OF THE PELVIS AND STIFLE JOINTS**

Feline A VD view of the pelvis and mediolateral & craniocaudal projection of the stifle joints is provided for review.

**BREED RADIOGRAPHIC FINDINGS**

Main Coon Mix The 7<sup>th</sup> & 8<sup>th</sup> caudate vertebra are fused.

**SEX** In the pictured parts of the left caudal abdomen, a well-defined ovoid shaped, egg-shell like mineralized body is visible measuring approximately 2/3 of the length of L6 in length.

Neutered Male

The osseous margins of the coxofemoral joints bilaterally are smooth. No abnormalities of the osseous structures are appreciated.

**AGE**

10 Years The right stifle joint show smooth osseous margins, the soft tissue structures present no abnormalities.  
 There is possible mild intracapsular swelling of the left stifle joint visible. The osseous margins of the left stifle joint are smooth.

**INTERPRETED BY**

Sebastian Schaub,  
 DVM Dr. med. vet.  
 DipECVCI

**RADIOGRAPHIC DIAGNOSIS**

- Possible mild articular swelling left stifle joint
- Bates body (nodular fat-necrosis) left caudal abdomen
- Normal pelvis

**HOSPITAL NAME**

St. Catharine's AH

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The potential swelling of the left stifle joint can be a subjective impression due to extended positioning of the stifle joint. Check if swelling of the stifle joint can be appreciated clinically and rule out instability of the stifle joint. No additional abnormalities are noted.
