

**PATIENT PRESENTING CLINICAL SIGNS**

**PATIENT** Ophello Sanders **PRESENTING CLINICAL SIGNS** History: Came in today and seemed to have a blocked bladder. Went to AESC last night and they pulled out a mucus plug and seemed to urinate after but this morning he was back to being blocked.

**SPECIES** Abnormal PE/Chem/CBC/UA Results: PE: 10CM FIRM BLADDER. MILD ABDOMINAL DISCOMFORT. SMALL (1MM OR LESS) STONES REMOVED FROM THE URETHRA AT THE TIP OF THE PENIS. CREPITUS FELT ALONG THE PENIS. STAGE III DENTAL DISEASE, NECK LESIONS DULL COAT, SOME DANDER. Labs are pending  
**Feline**

**BREED RADIOGRAPHIC STUDY OF THE ABDOMEN**

**DSH** A complete set of radiographs of the abdomen is provided for review.

**RADIOGRAPHIC FINDINGS**

**SEX**

**Neutered Male** The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

**AGE**

**10 Years 5 Months** The serosal detail is maintained throughout the peritoneal and retroperitoneal space.  
 The liver is appropriate in position, size and presents uniform opacity.

**INTERPRETED BY**

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Sebastian Schaub,  
 DVM Dr. med. vet.  
 DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. Mild hyperdense material is seen in the imaging plane of the left renal pelvis. The urinary bladder is markedly distended, and a small gas bubble is seen in the center of the urinary bladder. There is possible mild amount of granular mild mineral opaque material superimposed on the urinary bladder in the right lateral projection of the abdomen. The serosal fat level with the urinary bladder neck presents moderate soft tissue striation. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**HOSPITAL NAME**

Elizabeth AH

The stomach is in its anticipated position and presents normal content.

**REFERRING VET**

Leon Anderson, DVM

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

**RADIOGRAPHIC DIAGNOSIS**

- Markedly distended urinary bladder with small intraluminal gas bubble
- Possible small urinary calculi

**DATE**

10/8/21

**PATIENT**

- Mild nephrolithias
- Mild peritoneal effusion level with the urinary bladder neck

Ophello Sanders

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**SPECIES**

Feline

The findings are fitting the history of preceding catheterization with a small gas bubble within the urinary bladder and obstructive lower urinary tract disease. There appear to be some small calculi superimposed on the urinary bladder, concerning for small cystoliths. Ultrasound can be used to confirm bladder sand/small cystoliths and decision making if flushing the urinary can be used as an conservative treatment option.
