RADIOGRAPHIC STUDY OF THE ABDOMEN

SEX

Spayed Female

Orthogonal views of the abdomen are provided for review.

RADIOGRAPHIC FINDINGS

AGE

2 Years 3 Months

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

DPC Veterinary H

The stomach is in its anticipated position and presents normal content.

REFERRING VET

Dr. Feldt

The small intestinal loops are of even diameter and contain a mild amount of ingesta.

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

INVOICE

- Normal abdomen
