

PATIENT

Charlie Lindsay

PRESENTING CLINICAL SIGNS

Vomiting 10 times after access to the garbage bin. R/o foreign body. No string under tongue

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE ABDOMEN

Radiographs of the abdomen in three imaging planes are provided for review.

BREED

Domestic Shorthair

RADIOGRAPHIC FINDINGS

The vertebral endplates of the lumbosacral junction present moderate bridging spondylosis formation.

SEX

Spayed Female

At the cranioventral abdominal wall, a convex shaped swelling with central irregular mineralization is visible.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

AGE

14 Years

The splenic head is in the anticipated position and within normal limits for size and opacity.

The volume of the left kidney is moderately reduced, and the margins are irregular.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and empty.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

HOSPITAL NAME

Truscott Animal
Hospital

RADIOGRAPHIC DIAGNOSIS

- Mass cranioventral abdominal wall with dystrophic mineralization
- Left sided chronic nephropathy
- Spondylosis deformans L7/S1

REFERRING VET

Medhat Meawad

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents no abnormalities explaining the vomiting. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If clinical signs persist under empirical therapy, recommend follow up radiographs or an abdominal ultrasound examination; in some cases, a high ileus can lack classical radiographic signs for mechanical obstruction.

INVOICE

48152

There is a mass at the cranioventral abdominal wall, concerning for mammary tumor with dystrophic mineralization versus lipoma with fat-necrosis. Correlate with clinical findings.
