Gucci Amblo

PRESENTING CLINICAL SIGNS

Bilateral Grade 3 MPL Painful Right CF joint

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE PELVIS AND STIFLE JOINTS

Radiographs of the pelvis and the stifle joints in two orthogonal imaging planes are provided for review.

BREED

Miniature Schnauzer
Mix

RADIOGRAPHIC FINDINGS

The ventrodorsal projection of the pelvis is mild to moderately rotated to the left.

The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

Both stifle joints present smooth osseous margins and without evidence of intracapsular swelling. The patella bilaterally is in situ.

SEX

MN

RADIOGRAPHIC DIAGNOSIS

- Normal pelvis
- Normal stifle joints

AGE

2 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the pelvis and the stifle joints presents without abnormalities. However, patellar luxation is commonly a clinical diagnosis.
