

PATIENT

Oliver Bellwos

PRESENTING CLINICAL SIGNS

Seizures, drooling, lethargic, vomiting
Abnormal PE/Chem/CBC/UA Results: thrombocytopenia

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

An overview study including the thorax and abdomen in three imaging planes is provided for review.

BREED

Shihtzu

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Male Neuter

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

7 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

St. Catherine's Animal
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

The surrounding bony structures are within normal limits.

REFERRING VET

Dr. Dragan Gunj

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INVOICE

55272

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DATE

11-19-22

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount mineral opaque

PATIENT material is seen throughout the intestinal loops.

Oliver Bellwos The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

- SPECIES**
- Normal thorax
 - Normal abdomen – small amount of ingested osseous material throughout the small intestinal loops
- Canine

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

BREED The radiographic study of the thorax and abdomen presents without abnormalities explaining the presenting clinical signs. If not done so yet, recommend complementing blood work by cpl to rule out underlying pancreatitis.

Shihtzu

SEX

Male Neuter
