

PATIENT PRESENTING CLINICAL SIGNS

Misho Masoud vomiting (~1x/day) and coughing for 2 days, eating well.

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Feline An overview study including the thorax and abdomen in three imaging planes is provided for review.

BREED RADIOGRAPHIC FINDINGS

Ragdoll Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

Neutered Male The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

AGE The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

18 Months The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY Sebastian Schaub, DVM
Dr. med. vet. DipECVDI The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

HOSPITAL NAME The surrounding bony structures are within normal limits.

Truscott Animal Hospital No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

REFERRING VET The liver is appropriate in position, size and presents uniform opacity.

Dr. Mena Abdelsayed The splenic head is in the anticipated position and within normal limits for size and opacity.

INVOICE Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

54958 The stomach is in its anticipated position and presents normal content.

DATE The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

11-2-22 The colon is seen in the expected position and presents with appropriate content.

PATIENT

Misho Masoud

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
- Normal abdomen

SPECIES

Feline

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents without abnormalities. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction.

BREED

Ragdoll

Be aware that negative radiographs do not rule out possible inflammatory lower airway disease as source for the recent onset of cough entirely and radiographic changes lack behind clinical signs. Depending on the development of clinical signs, follow up radiographs might be beneficial.

SEX

Neutered Male

AGE

18 Months

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

HOSPITAL NAME

Truscott Animal
Hospital

REFERRING VET

Dr. Mena Abdelsayed

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

INVOICE

54958

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
