

## PATIENT

Columbia Quinn

## SPECIES

Canine

## BREED

Weimaraner

## SEX

FS

## AGE

6

## WEIGHT

70lbs

## INTERPRETED BY

Sebastian Schaub, DVM  
Dr. med. vet.  
DipECVDI

## IMAGING PERFORMED BY

Vet techs

## HOSPITAL NAME

Northshore Veterinary  
Hospital

## REFERRING VET

Caley Howard

## INVOICE

72700

## DATE

11-20-25

## PRESENTING CLINICAL SIGNS

6 week duration of left forelimb lameness, no obvious trauma. Significantly improved with rest and NSAIDs but owners still appreciate it every once in a while

Abnormal PE/Chem/CBC/UA Results: Exam before NSAIDs revealed 1/4 LF lameness with repeated sensitivity on L elbow flexion. Today, after 3 weeks of NSAIDs and rest, exam is completely normal, no lameness appreciated and no pain appreciated. Owners say they see a limp at home every once in a while

## RADIOGRAPHIC STUDY OF THE SHOULDER AND ELBOW JOINTS

Radiographs of the shoulder and elbow joints are provided for review.

## RADIOGRAPHIC FINDINGS

Both shoulder joints present smooth margins of the periarticular bones and the surrounding soft tissue structures are within normal limits.

The elbow joints have smooth margins of the periarticular bones. The contour of the medial coronoid process is well-defined and has a homogeneous density, unremarkable. The surrounding soft tissue structures of the elbow joints are within normal limits.

## RADIOGRAPHIC DIAGNOSIS

- Normal shoulder joints
- Normal elbow joints

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals no abnormalities and an underlying cause for the front limb lameness cannot be specified.
