

## PATIENT

Dexter Kehnel

## SPECIES

Canine

## BREED

Retriever Mix

## SEX

MN

## AGE

6Y, 5M

## WEIGHT

25.3lbs

## INTERPRETED BY

Sebastian Schaub, DVM  
Dr. med. vet.  
DipECVDI

## IMAGING PERFORMED BY

Christopher Lopresto,  
VMD

## HOSPITAL NAME

Pet Allergy &  
Dermatology  
Specialists

## REFERRING VET

Christopher Lopresto,  
VMD

## INVOICE

72706

## DATE

11-20-25

## PRESENTING CLINICAL SIGNS

Chronic bilateral otitis.

## COMPUTED TOMOGRAPHY OF THE SKULL

A high resolution pre- and post-contrast CT study of the skull is provided for review.

## COMPUTED TOMOGRAPHIC FINDINGS

The splanchnocranium is cropped by the field of view.

The tooth element 308 is absent.

Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external ear canals present a mild thickened wall along with mild to moderate shell-like mineralization. The epithelial lining of the ear canals is mildly rough. In the most medial aspect of the ear canals, a very small amount of non-contrast enhancing soft tissue material is visible.

The brain presents no deviation from normal anatomy and symmetry. The brain parenchyma is homogeneous and within normal limits for attenuation and distribution of contrast enhancement. The ventricular system is non-dilated and symmetric.

The submandibular and medial retropharyngeal lymph nodes are small and elongated with a normal short-to-long-axis-ratio is  $< 0.5$ , the attenuation and contrast enhancement pattern is uniform.

## COMPUTED TOMOGRAPHIC DIAGNOSIS

- History of bilateral otitis externa with mild dystrophic mineralization of the ear canals
- No evidence of otitis media
- Absent triadan 308

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study reveals only mild changes of the ear canals, fitting the history of otitis externa. Depending on the severity of presenting clinical signs, either conservative or surgical management options can be discussed with dermatologist/surgeon.
