10 Years 3 Months

**RADIOGRAPHIC FINDINGS**

**INTERPRETED BY**

The metacarpophalangeal joints of the left 2<sup>nd</sup> to 4<sup>th</sup> phalanx and the right 2<sup>nd</sup> and 3<sup>rd</sup> phalanx present mild to moderate osteophyte new bone formation.

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

The remainder of the osseous structures of the front paws are within normal limits. The surrounding soft tissue structures present no abnormalities.

**HOSPITAL NAME**

The nails of the front paws are generalized elongated.

DPC Veterinary H

**RADIOGRAPHIC DIAGNOSIS**

- Degenerative joint disease multiple metacarpophalangeal joints front paws bilaterally, see above

**REFERRING VET**

Dr. White

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The degenerative joint disease of the metacarpophalangeal joints might be a source for lameness. No additional abnormalities or signs for pathological soft tissue swelling are appreciated.
