

**PATIENT**

Ellie Jiji

PRESENTING CLINICAL SIGNS

Acute LF lameness, P cries upon palpation of caudal elbow and elbow extension

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ELBOW JOINTS

Radiographs of the elbow joints in two imaging planes are provided for review.

BREED

Cav King Charles

The growth plates are age related open.

The osseous margins of the elbow joints are smooth, and the joint spaces are congruent. The surrounding soft tissues are within normal limits.

SEX

FE

RADIOGRAPHIC DIAGNOSIS

- Normal elbow joints

AGE

10 Weeks

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents without abnormalities of the elbow joints and the presumptive diagnosis is distortion/contusion. If clinical signs persist or there is suspicion for trauma of the growth plates, follow up radiographs are recommended in 1-2 weeks.
