

**PATIENT**

Steve Klingender

**PRESENTING CLINICAL SIGNS**

one day history of lethargy, reduced appetite and tense painful abdomen .  
Abnormal PE/Chem/CBC/UA Results: elevated WBC

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

Radiographs of the abdomen in three imaging planes are provided for review.

**BREED**

Golden Retriever

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

**SEX**

Male

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

**AGE**

24 Months

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops. Some segments of the small intestinal loops contain a small amount of foamy material without dilation of the respective segments of the small intestinal loops.

**HOSPITAL NAME**

St. Catherine's Animal  
Hospital

The colon is seen in the expected position and presents with appropriate content.

**RADIOGRAPHIC DIAGNOSIS**

- Normal abdomen

**REFERRING VET**

Dr. Boctor

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study of the abdomen presents without abnormalities. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. Depending on the development of clinical signs under empirical therapy, follow up radiographs or an abdominal ultrasound examination might be considered.
