

PATIENT

Honey May
Moerschel

PRESENTING CLINICAL SIGNS

History: Presented for acute onset of vomiting. O reports P had vomited approx. 3 times within the last 24 hours, first partially digested food and some bile. Owner found portions of a rope toy in vomitus.

SPECIES

Canine

Abnormal PE/Chem/CBC/UA Results: Mildly tense throughout abdominal palpation. Rectal exam has solid fecal material present.

RADIOGRAPHIC STUDY OF THE ABDOMEN

BREED

Labrador Retriever

Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

SEX

Spayed Female

The surrounding bony structures are within normal limits, the growth plates are age related open. No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

AGE

5 Months

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The stomach is in its anticipated position and empty.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

HOSPITAL NAME

Boca Park AH

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

- Empty stomach

REFERRING VET

Dr. Ashman

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the abdomen presents without abnormalities. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. Recommend empirical management, if clinical signs are refractory to therapy recommend follow up radiographs or a complete abdominal ultrasound examination; in some cases, a high ileus can lack classical radiographic signs of mechanical obstruction.
