

PATIENT

Tiger Lake

PRESENTING CLINICAL SIGNS

Restless, Seems uncomfortable on abdomen, Stretching back legs, Ate this AM, no c/s/v/d
Abnormal PE/Chem/CBC/UA Results: Pending

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Radiographs of the thorax in two orthogonal imaging planes and a laterolaterale view of the abdomen are provided for review.

BREED

English Cocker
Spaniel

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

SEX

MN

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

5 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The lung field is extending up to the level of the T11. The lung parenchyma has a generalized mild to moderate unstructured reticular pattern ; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

Byram Animal
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

The surrounding bony structures are within normal limits.

REFERRING VET

Dr. Maria Cruz

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INVOICE

55000

The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DATE

11-4-22

The stomach is in its anticipated position and presents normal content.

**PATIENT**

Tiger Lake

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

SPECIES

Canine

RADIOGRAPHIC DIAGNOSIS

- Moderate unstructured interstitial lung pattern
- Normal abdomen

BREEDEnglish Cocker
Spaniel**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The unstructured interstitial pattern is likely a sequela to hypoinflation of the lung parenchyma. The odds for a clinically relevant interstitial pattern are low, potentials would include fibrosis, pneumonitis (inflammatory versus infectious), systemic disease (e.g. pancreatitis, IMHA, renal disease), neoplasia.

SEX

MN

No abnormalities of the abdomen are appreciated.

AGE

5 Years
