

PATIENT

Gunnarr Potthoff

PRESENTING CLINICAL SIGNS

Everything was going good and they finished the meds and yesterday he started the coughing and last night was a really bad night of coughing and restless and licking a lot. Did vomit a little this morning. Then ate some food this morning and then vomited this morning while here at the clinic. Abnormal PE/Chem/CBC/UA Results: PE: Unremarkable other than the coughing and vomiting NO RECENT LABS

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

A complete set of radiographs of the thorax and abdomen is provided for review.

BREED

Weimaraner

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

SEX

The extrathoracic soft tissues present homogeneous without abnormalities.

Neutered

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

11 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME

Elizabeth Animal
Hospital

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

REFERRING VET

Leon Anderson, DVM

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INVOICE

55004

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

DATE

11-5-22

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**PATIENT**

The stomach is in its anticipated position and presents normal content.

Gunnarr Potthoff

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

SPECIES

The colon is seen in the expected position and presents with appropriate content.

Canine

- Normal thorax
- Normal abdomen

BREED

Weimaraner

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The current set of radiographs of the thorax and abdomen presents without abnormalities. There is no sign of pneumonia – radiographic changes can lack behind clinical signs. Due to the recurrent inflammatory lower airway disease, bronchoscopy including BAL appear beneficial.

SEX

Neutered

AGE

11 Years
