

PATIENT

Abby Healey

PRESENTING CLINICAL SIGNS

P has been having a harder time getting up in the mornings.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE PELVIS AND STIFLE JOINTS

A ventrodorsal view of the pelvis and radiographs of the stifle joints in two imaging planes are provided for review.

BREED

Labrador Retriever

RADIOGRAPHIC FINDINGS

The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

SEX

Spayed Female

Both stifle joints present smooth osseous margins of the periarticular bones. The soft tissues of the cranial compartment of the stifle joints is overexposed, no overt intracapsular swelling of the stifle joints is appreciated.

AGE

7 Years

RADIOGRAPHIC DIAGNOSIS

- Normal pelvis
- Normal stifle joints

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The current radiographic study of the pelvis and stifle joints presents without pathologies. Check if neurological deficits are present, indicating underlying myelopathy.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

HOSPITAL NAME

The Pet Hospital of
Stratford

REFERRING VET

Dr. Claudia Giuliani,
DVM

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

INVOICE

55006

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
