

**PATIENT**

Reggie Schneider

**PRESENTING CLINICAL SIGNS**

Presented to the ER for sudden onset seizures last PM. CT to determine disease process - neoplasia vs. other CSF collected at time of CT - results pending

**SPECIES**

Canine

**COMPUTED TOMOGRAPHY OF THE SKULL**

A high resolution pre- and post-contrast CT study of the skull is provided for review.

**BREED**

Border Collie Mix

**COMPUTED TOMOGRAPHIC FINDINGS**

The tooth elements 106, 205, 306, 405 and 406 are absent. The tip of the crown of triadan 201 is absent.

**SEX**

MN

The nasal cavity presents the expected aerated spaces between thin & even conchae and turbinates with smooth mucosal lining.

Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external ear canals are within normal limits.

**AGE**

13 Years

In the rostral cranial fossa, centered on the right aspect of the falx cerebri, a roundish mild mineralizing, mild contrast enhancing mass is appreciated, measuring 1.9 x 1.9 x 2.3 cm in size. The falx cerebri is deviated to the left by the mass effect. The right lateral ventricle is distorted.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The submandibular and medial retropharyngeal lymph nodes are small and elongated with a normal short-to-long-axis-ratio is < 0.5, the attenuation and contrast enhancement pattern is uniform.

**COMPUTED TOMOGRAPHIC DIAGNOSIS**

- Intracranial extraaxial mild mineralizing mass centered on rostral segment of the falx cerebri
- Multiple absent teeth

**HOSPITAL NAME**

Southern Oregon  
Veterinary Specialty  
Center

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The intracranial extraaxial mild mineralizing mass is highly suggestive for meningioma with significant mass effect on the brain parenchyma at the same level. The finding is a plausible explanation for the recent onset of seizure activity. The chances of radiation therapy can be discussed with oncologist.
