

**PATIENT**

Timon Foster

PRESENTING CLINICAL SIGNS

Brought in for yearly, notes that he had been hesitant to jump on anything really high for last few months. Will always look for something tower to jump on first. Still willing to stretch high for treats, but high jumps are less frequent.

SPECIES

Feline

Abnormal PE/Chem/CBC/UA Results: Timon is sensitive on extension of the right hip. It feels stiff and when I went full extension he did growl a little. Radiographs show some small arthritic changes in knees, but area in sacrum that looks like there might be something wrong there.

RADIOGRAPHIC STUDY OF THE LUMBAR SPINE**BREED**

DMH

Radiographs of the lumbar spine in a lateral and ventrodorsal view are provided for review.

RADIOGRAPHIC FINDINGS

The osseous and surrounding soft tissue structures of the lumbar spine present without abnormalities. The intervertebral disc spaces of the lumbar spine present an even width.

SEX

MN

RADIOGRAPHIC DIAGNOSIS

- Normal lumbar spine

AGE

6 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the lumbar spine – including the sacral region – present without abnormalities. The heterogeneity of the sacral bone in the VD projection is considered as a sequela to the superimposed fecal material.
