## DATE

12-1-25

## PRESENTING CLINICAL SIGNS

Referred her by, Dr Leja for radiographs, chronic intermittent upper respiratory discharge for ~ past 10 months. Transient positive improvement with DepoMedro inj. Culture sensitivity no growth  
Abnormal PE/Chem/CBC/UA Results: BW CBC/Chem by referring Vet NSF

## RADIOGRAPHIC STUDY OF THE SKULL

Radiographs of the skull in multiple image planes are provided for review.

## RADIOGRAPHIC FINDINGS

Multiple teeth are absent.

The nasal cavity presents the expected aerated spaces with a fine mineral opaque striation of the nasal conchal structures. The nasopharynx is aerated.

The external ear canals are aerated, unremarkable. The tympanic bullae present a thin and smooth wall.

No additional abnormalities along the osseous and soft tissue structures of the skull.

## RADIOGRAPHIC DIAGNOSIS

- Multiple absent teeth
- Normal appearing upper airways

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the skull reveals no abnormalities of the upper airways – if clinical signs deteriorate, workup can be complemented by a CT study of the skull to screen for more subtle lesions not appreciated by radiography.
