

## PATIENT

Spider Grange

## SPECIES

Feline

## BREED

DLH

## SEX

Neutered Male

## AGE

7 Years

## WEIGHT

4.3 kg

## INTERPRETED BY

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

## IMAGING PERFORMED BY

Mountain West VS  
Layton

## HOSPITAL NAME

Mountain West VS

## REFERRING VET

Dr. Andrew Burton

## INVOICE

35888

## DATE

12/12/25

## PRESENTING CLINICAL SIGNS

History: Pet has history of IBD, asthma, and constipation, history of vomiting bile, lethargic and inappetence. Pet started not wanting to get up or move and very lethargic 12/10/25. Pet is on steroids and lactulose. Progressive hindlimb weakness. Concern for possible tarsal laxity or cruciate tear.

## COMPUTED TOMOGRAPHIC STUDY OF THE STIFLE JOINTS

A high resolution pre- and post-contrast CT study of the stifle joints is provided for review.

## COMPUTED TOMOGRAPHIC FINDINGS

Both stifle joints present smooth margins of the periarticular bones and no evidence of an intracapsular soft tissue swelling. The surrounding soft tissue structures of both stifle joints are within normal limits.

No overt abnormalities are appreciated along the osseous and soft tissue structures of the entire hind limbs.

## COMPUTED TOMOGRAPHIC DIAGNOSIS

- Normal stifle joints

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study reveals no abnormalities and an underlying cause for the described clinical signs cannot be specified.

**The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.**

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
