

PATIENT PRESENTING CLINICAL SIGNS

Alvin Flinn History: (previous rads have been sent this is a recheck) 2 weeks off antibiotics for pneumonia, cough has reoccurred and seems lethargic, rechecking radiographs to ensure pneumonia gone
Abnormal PE/Chem/CBC/UA Results:

SPECIES RADIOGRAPHIC STUDY OF THE THORAX

Canine Radiographs of the thorax in two imaging planes are provided for review.

BREED RADIOGRAPHIC FINDINGS

Beagle Mix The caudal thoracic spine presents with mild to moderate spondylosis formation, stationary.
The extrathoracic soft tissues present homogeneous without abnormalities.

SEX The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

Neutered Male The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

11 Years Mild increased visibility of the bronchial walls is noted, stationary.

INTERPRETED BY The lung parenchyma presents the expected architecture and generalized increased opacity, caused by an unstructured reticular pattern; the intrapulmonary vascular branching is seen up to the third order lung vessels.

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME RADIOGRAPHIC DIAGNOSIS

Sylvan Lake VC

- Stationary mild bronchial lung pattern with stationary interstitial component
- Spondylosis deformans

REFERRING VET

Dr. Babette
Baskerville

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE The thoracic study is negative for signs of pneumonia. The broncho-interstitial pattern is stationary in comparison to the preceding radiographs and likely accentuated by the radiographic algorithm and age-related changes of the lung. As there is relapse of cough, complementing workup by bronchoscopy including BAL might be beneficial.
