

PATIENT

Finn Isaac

PRESENTING CLINICAL SIGNS

Pet presented for continuous vomiting, not eating or drinking, lethargy and hiding for the past 5 days. Temperature today was 100.5 degrees Fahrenheit.

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE ABDOMEN

Radiographs of the abdomen in three imaging planes are provided for review.

BREED

Domestic Shorthair

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

SEX

Male Neutered

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

AGE

7 Years, 7 Months

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and contains a small amount of gas.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and is nearly empty.

HOSPITAL NAME

Denville Animal
Hospital

RADIOGRAPHIC DIAGNOSIS

- Empty gastrointestinal tract

REFERRING VET

Doctor Reddy

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents no abnormalities explaining the presenting clinical signs, but the empty gastrointestinal tract as a sequela to the clinical signs. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. Recommend complementing workup by complete blood work including fpl. If clinical signs are refractory to therapy, recommend follow up radiographs or a complete abdominal ultrasound examination; in some cases a high ileus may lack classical radiographic signs of mechanical obstruction.
