

**PATIENT**

Lola Cookie Gibbs

**PRESENTING CLINICAL SIGNS**

chronic limping since October. responded well to NSAID (metacam). came in today - favouring left front leg

**SPECIES**

Feline

**RADIOGRAPHIC STUDY OF THE CARPAL JOINT**

Radiographs of the carpal joints are provided for review.

**BREED**

Munchkin

**RADIOGRAPHIC FINDINGS**

There is a breed specific chondrodystrophic conformation of the bones of the antebrachium with mild to moderate procurvatum conformation and lateral bending of the antebrachium – varus conformation. The antebrachiocarpal joint present a mediolateral sloping of the distal joint surface of the radius.

**SEX**

Female Spayed

Six metacarpal bones are present.

The distal phalanx of the digits is absent in all digits.

**AGE**

3 Years

**RADIOGRAPHIC DIAGNOSIS**

- Chondrodystrophic conformation of the osseous structures with angular limb deformity
- Dysplastic antebrachiocarpal joint bilaterally
- Polydactyly
- History of declawing procedure

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

There is breed specific chondrodystrophic conformation, angular limb deformity and dysplastic conformation of the antebrachiocarpal joint bilaterally, being a potential predisposing factor for the clinical signs due to the altered biomechanics of the front limbs. At this point there is no evidence of overt degenerative joint disease.
