Abnormal PE/Chem/CBC/UA Results: CV/Respiratory: Normal heart rate and rhythm, no murmur, pulses strong and synchronous, normal bronchovesicular sounds. EENT: Clear OU and AU. No nasal discharge. Oral cavity: Moderate dental tartar Musculoskeletal: BCS = 8/9. Ambulatory x 4 Uro/Perineum: No significant lesions Abd/GI: Soft, non-painful. No masses or fluid wave palpated Lymph Nodes: No peripheral lymphadenopathy Neurological: Alert and appropriate. No significant abnormalities Skin: Good hair coat. No ectoparasites seen Mentation: BAR Hydration: N

SEX

RADIOGRAPHIC STUDY OF THE THORAX

Spayed Female

Radiographs of the thorax in two orthogonal imaging planes are provided for review.

AGE

RADIOGRAPHIC FINDINGS

13 Years 2 Months

The body condition score is 9/9.

The surrounding bony structures are within normal limits.

INTERPRETED BY

The extrathoracic soft tissues present homogeneous without abnormalities.

Sebastian Schaub,
 DVM Dr. med. vet.
 DipECVDI

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

HOSPITAL NAME

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

DPC Veterinary H

Sporadic mild peribronchial cuffing is present.

REFERRING VET

Dr. Rivera

The lung parenchyma presents a generalized ground glass opacification, due to the nutritional status. In the VD view, the right lung lobes present a moderately reduced volume with midline shift of the heart to the right and moderate ground glass opacification of the parenchyma of the right lung lobes.

INVOICE

12800

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The mild bronchial pattern is supporting the diagnosis of potential feline bronchial disease – allergic causes would be most likely. The increased radiopacity of the right lung lobes is likely a sequela to atelectasis due to preceding right lateral recumbency.

HOSPITAL NAME

DPC Veterinary H

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

REFERRING VET

Dr. Rivera

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
