

PATIENT

Matrix Bongard

PRESENTING CLINICAL SIGNS

intermittent right side nasal discharge and facial swelling

COMPUTED TOMOGRAPHY OF THE SKULL

SPECIES

A plain CT study of the skull is provided for review.

Canine

COMPUTED TOMOGRAPHIC FINDINGS

The pictured parts of the dentition are complete and unremarkable in all jaw quadrants.

BREED

The nasal cavity presents the expected aerated spaces between thin & even conchae and turbinates with smooth mucosal lining. Very mild amount of mineralized material is associated with the dorsal aspect of the nasal openings bilaterally.

German Shep

SEX

Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

MN

Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external ear canals are within normal limits.

AGE

The brain presents no deviation from normal anatomy and symmetry. The brain parenchyma is homogeneous and within normal limits for attenuation. The ventricular system is non-dilated and symmetric.

4 Years

INTERPRETED BY

The submandibular and medial retropharyngeal lymph nodes are small and elongated with a normal short-to-long-axis-ratio is < 0.5, the attenuation pattern is uniform.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study of the skull presents no abnormalities, explaining the described clinical signs. There are no signs rhinitis or underlying dental disease. Repeating the CT study if facial swelling is present might be beneficial. Rule out underlying allergic reaction.
