

PATIENT

Lucky Vinasco

PRESENTING CLINICAL SIGNS

Mild sensitivity on lumbar and sacral spine

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN

A complete set of radiographs of the thorax and abdomen is provided for review.

BREED

Pekingese

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Male

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

10

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

Animal Paradise
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

REFERRING VET

Dr. Elshafie

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INVOICE

49212

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

DATE

12-22-21

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. A mineralized body is superimposed on the dorsocaudal aspect of the urinary bladder.

PATIENT

Lucky Vinasco

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

SPECIES

Canine

The colon is seen in the expected position and presents with appropriate content.

BREED

Pekingese

- Mineralized body caudodorsal aspect urinary bladder
- Normal thorax

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SEX

Male

The mineralized body is considered as a small, mineralized body within the colon and the odds for an ureterolith or cystolith are considered low. A follow up radiograph of the abdomen can be used to check if the mineralized body has passed the colon.

AGE

10
