RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

BREED

DSH

An overview study including the thorax & abdomen in two imaging planes is provided for review.

RADIOGRAPHIC FINDINGS

SEX

Male Neutered

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

14 Years

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME

St. Catherine's Animal Hospital

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

REFERRING VET

Dr. Bekhit

Abdomen

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INVOICE

49330

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

DATE

12-30-21

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

PATIENT

The stomach is in its anticipated position and presents normal content.

Junior Eberhardt

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

SPECIES

The colon is seen in the expected position and presents with appropriate content.

Feline

RADIOGRAPHIC DIAGNOSIS

BREED

- Normal thorax
- Normal abdomen

DSH

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SEX

The radiographic study of the thorax and abdomen presents without abnormalities. An abdominal ultrasound examination might be used for further evaluation of organ architecture of the abdominal organs.

Male Neutered

AGE

14 Years
