PRESENTING CLINICAL SIGNS

Lameness on RF

RADIOGRAPHIC STUDY OF THE SHOULDER JOINTS

Radiographs of the shoulder joints in two orthogonal image planes are provided for review.

RADIOGRAPHIC FINDINGS

The humerus bilaterally presents the expected trabecular pattern and smooth cortical margins. The surrounding soft tissue structures of the humerus reveals no abnormalities.

Both shoulder joints present smooth margins of the periarticular bones and the surrounding soft tissue structures are within normal limits.

RADIOGRAPHIC DIAGNOSIS

- Normal shoulder joints
- Normal humeri

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals no abnormalities and an underlying cause for the right front limb lameness cannot be specified.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
