

PATIENT

Callie Onken

PRESENTING CLINICAL SIGNS

Pt has mild right sided exophthalmos. IOPs are within normal limits and the eye is grossly normal otherwise. Pt coincidentally was diagnosed as hyperthyroid today.
Abnormal PE/Chem/CBC/UA Results: Elevated total T4/free T4.

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE SKULL

Radiographs of the skull in two orthogonal imaging planes are provided for review.

BREED

DSH

RADIOGRAPHIC FINDINGS

The osseous structures of the skull are within normal limits. The nasal cavity is aerated.

The right ocular bulb appears to be mildly deviated in a temporal direction.

SEX

Female Spayed

No abnormalities of the external ear canals and tympanic bullae are appreciated.

AGE

12 Years

RADIOGRAPHIC DIAGNOSIS

- Mild right sided exophthalmos

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study is supporting the diagnosis of right sided mild exophthalmos, concerning for a retrobulbar neoplastic or inflammatory lesion. An underlying cause is not appreciated there are no signs for osseous changes that can be detected by radiography. Ultrasound or a CT study of the skull can be used as advanced diagnostic test.
