

PATIENT PRESENTING CLINICAL SIGNS

Seamus Tousius Urinary obstruction several years ago (managed with Royal Canin SO and O's monitor urination multiple times daily to ensure proper urinary behavior/evacuation) - Inappetance beginning 48 hours prior to presentation - P does not appear to be drinking as much

SPECIES Abnormal PE/Chem/CBC/UA Results: - Grade II/IV dental tartar - Otitis externa present (tested and medication prescribed) - Depressed, lethargic on presentation - Unrewarding palpation due to sensitivity, tension, and BCS
 Feline WBC - 3.02/5.5 LYM 0.50/1.5 NEU 2.27/2.5 RBC 10.93/5 MCH 12.2/12.5 PLT 197/300 MPV 9.1/12 AMY 1211/1100 GLU 152/150

BREED RADIOGRAPHIC STUDY OF THE ABDOMEN

Domestic Shorthair Radiographs of the abdomen in two imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

SEX The body condition score is 7/9.

Male Neutered The surrounding bony structures are within normal limits.

AGE No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

14 The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INTERPRETED BY The liver is appropriate in position, size and presents uniform opacity.

Sebastian Schaub, DVM Dr. med. vet. DipECVDI The splenic head is in the anticipated position and within normal limits for size and opacity.

HOSPITAL NAME Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Boca Park Animal Hospital The stomach is in its anticipated position and presents normal content.

REFERRING VET The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Tifanie Silver The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

INVOICE • Obesity

50265 **INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

DATE The radiographic study of the abdomen is negative for pathology, explaining the current onset of hyporexia. If not done so yet, recommend complementing complete lab work by fpl to screen for underlying pancreatitis. An abdominal ultrasound examination can be used to check for abnormalities of the architecture of the parenchymal organs, not appreciated by radiography.
