

PATIENT

Bonny He

PRESENTING CLINICAL SIGNS

P is presented for on and off diarrhea and vomiting for the past 2 weeks.

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

SPECIES

A complete set of radiographs of the thorax and abdomen is provided for review.

K9

RADIOGRAPHIC FINDINGS

Thorax

BREED

The surrounding bony structures are within normal limits.

Samoyan

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

FS

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

4 Years

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

DTLAvets

Abdomen

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

REFERRING VET

Dr. Montoya

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INVOICE

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

56760

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DATE

2-14-23

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

PATIENT **RADIOGRAPHIC DIAGNOSIS**

Bonny He

- Normal thorax
- Normal abdomen

SPECIES **INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

K9

The radiographic study of the thorax and abdomen is negative for pathologies. No underlying cause for the intermittent diarrhea and vomiting is appreciated. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. Rule out possible dietary indiscretion, dysbacteriosis, parasitic infection, other.
