

PATIENT

Bowie Lance-Seghi

PRESENTING CLINICAL SIGNS

5 images of thorax & TL spine are submitted for review. On recent exam: Thoracic spine - mild caudal thoracic lordosis, cranial lumbar kyphosis, good ROM to hips bilaterally. Lumbar paraspinal tightness and soreness L1-L4 Owner feels he still seems sore in his lumbar spine, sometimes worse than other Bowie has an occasional cough (like he is trying to clear his throat), so would like his thorax evaluated as well.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & LUMBAR SPINE

BREED

Husky Mix

Radiographs of the thorax & lumbar spine in two orthogonal imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

SEX

Thorax

MN

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

7 Years, 7 Months

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

HOSPITAL NAME

Tahoe Intergrative
Veterinary Care

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

REFERRING VET

Dr. Wendy Robinson

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Lumbar spine

INVOICE

50400

The osseous and surrounding soft tissue structures of the lumbar spine are within normal limits.

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
- Normal lumbar spine

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study is negative for pathology. If clinical signs deteriorate or neurological deficits develop, cross-sectional imaging appears as a beneficial advanced imaging modality.
