

PATIENT

Vinny Mezzina

PRESENTING CLINICAL SIGNS

O wrote a written note for masses that have appeared Marked masses on body with black ink.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

A complete set of radiographs of the thorax and abdomen is provided for review.

BREED

Chihuahua

RADIOGRAPHIC FINDINGS

Thorax

The left shoulder joint presents mild to moderate osteophyte new bone formation.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Neutered

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

8 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

Animal Paradise
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

REFERRING VET

Dr. Mostafa Elshafie

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INVOICE

50392

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

DATE

2-17-22

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

PATIENT

Vinny Mezzina

The stomach is in its anticipated position and is empty.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

SPECIES

Canine

The colon is seen in the expected position and contains a small amount of unformed fecal material and is otherwise empty.

BREED

Chihuahua

- Degenerative osteoarthritis left shoulder joint
- Normal thorax
- Normal abdomen

RADIOGRAPHIC DIAGNOSIS

SEX

Neutered

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen presents without relevant pathologies. There is no evidence of metastatic disease.

AGE

8 Years

TECHNICAL COMMENTS

A human finger is seen in the primary beam, please consider radiation safety guidelines.
