

PATIENT

Ninja Moszynski

PRESENTING CLINICAL SIGNS

sudden onset of stiffness , hunched over , abdominal pain
Abnormal PE/Chem/CBC/UA Results: BG 13.1 (4 - 7)

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

Radiographs of the abdomen in three imaging planes are provided for review.

BREED

Shih Tzu

RADIOGRAPHIC FINDINGS

The growth plates are age related open. The osseous and surrounding soft tissue structures of the lumbar spine are within normal limits.

SEX

Female

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

AGE

6 Months

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

HOSPITAL NAME

St. Catherine's Animal
Hospital

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

Dr. Boctor

- Normal abdomen & lumbar spine

RADIOGRAPHIC DIAGNOSIS

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE

50495

The radiographic study of the abdomen/lumbar spine presents without abnormalities, explaining the clinical signs. If clinical signs are refractory to empirical therapy, consider complementing workup by an abdominal ultrasound examination.
