PRESENTING CLINICAL SIGNS

Owner brought in for possible broken back/pelvis/leg. Owner had someone working on the washer, he went to jump to the other side and did not see Phillip and the worker landed on Phillip's back. Phillip immediately started to scream and would not move. Owner brought him in right away (about 15 mins) Owner set Phillip on the scale where he stood there but would not walk. He was shaking his hind end and did not seem steady.

Abnormal PE/Chem/CBC/UA Results: Stands but wobbly and needs support. Unable to easily bend left stifle. Does have good reflexes in both hind legs and deep pain. Did not seem overly painful (not crying in pain). Buprenorphine and Carprofen injections were given right away and by the end of the visit Phillip seemed more comfortable and was able to sit on his own.

RADIOGRAPHIC STUDY OF THE PELVIS

Radiographs of the two imaging planes are provided for review. Images are provided in JPEG file format.

RADIOGRAPHIC FINDINGS

There is limited image resolution and compression artefacts are noted.

The growth plates are age related visible.

The VD projection of the pelvis is moderately rotated. The osseous and surrounding soft tissue structures of the pelvis are considered within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

RADIOGRAPHIC DIAGNOSIS

- Normal pelvis

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents without abnormalities, I do not see evidence of pelvic fracture but the open growth plates. If clinical signs persist, recommend follow up radiographs to rule out traumatic growth plate injury.

PATIENT

Phillip Leh

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
