

PATIENT PRESENTING CLINICAL SIGNS

Lila Grimm History: Epistaxis
Abnormal PE/Chem/CBC/UA Results: Labs WNL. 4DX negative

SPECIES COMPUTED TOMOGRAPHIC STUDY OF THE SKULL

Canine A high resolution pre- and post-contrast CT study of the skull is provided for review.

BREED COMPUTED TOMOGRAPHIC FINDINGS

German Shepherd The pictured parts of the dentition are complete and unremarkable in all jaw quadrants.

SEX The nasal cavity presents the expected aerated spaces between thin & even conchae and turbinates with smooth mucosal lining.

Intact female Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

AGE Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external ear canals are within normal limits.

5 Years

INTERPRETED BY The brain presents no deviation from normal anatomy and symmetry. The brain parenchyma is homogeneous and within normal limits for attenuation and distribution of contrast enhancement. The ventricular system is non-dilated and symmetric.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The submandibular and medial retropharyngeal lymph nodes are small and elongated with a normal short-to-long-axis-ratio is < 0.5, the attenuation and contrast enhancement pattern is uniform.

HOSPITAL NAME COMPUTED TOMOGRAPHIC DIAGNOSIS

Mobile Pet Imaging

- Structural normal skull
- Normal upper airways

REFERRING VET INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Dr. Meaux There is no evidence for neoplastic disease of the nasal cavity or foreign body related rhinitis, potentials for epistaxis include immune mediated disease, non-specific rhinitis (e.g., lymphocytic plasmocytic), hyperviscosity syndrome (e.g., Leishmaniosis), other causes for coagulopathy or systemic hypertension.
