

**PATIENT PRESENTING CLINICAL SIGNS**

Luna Pace History: Patient presented for shaking. B/G is 60 and insulin was 34 normal ranges (7.5-20). R/O Insulinoma

**SPECIES Abnormal PE/Chem/CBC/UA Results:**

Canine

**COMPUTED TOMOGRAPHIC STUDY OF THE ABDOMEN**

**BREED**

A high resolution pre- and post-contrast CT study of the skull and abdomen and a post-contrast CT study of the thorax are provided for review.

Mixed

**COMPUTED TOMOGRAPHIC FINDINGS**

**SEX**

The caudal abdomen is cropped by the field of view.

Spayed Female

The serosal fat presents normal attenuation behavior. There is no evidence of peritoneal effusion or peritonitis.

**AGE**

Both kidneys present within normal limits for size, shape and organ architecture. After contrast administration a bilaterally symmetric and uniform nephro- and pyelogram is noted.

2.5 Years

The adrenal glands are within normal limits for size, shape and organ architecture.

**INTERPRETED BY**

Both liver and spleen present with normal shape, even surface, uniformly attenuating parenchyma and homogeneous contrast enhancement, unremarkable.

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

Multifocal mild pinpoint mineralization of the hepatic parenchyma is noted.

**HOSPITAL NAME**

The pancreas is evenly contoured, the pancreatic parenchyma is homogeneous and presents uniform contrast enhancement.

Animal Clinic of  
Queens

The position, delineation, wall and content of the gastrointestinal tract are considered within normal limits throughout.

The bony and surrounding soft tissue structures reveal no abnormalities.

**REFERRING VET**

Dr. Piotr Kwasnik

**COMPUTED TOMOGRAPHIC DIAGNOSIS**

- Suspect incidental mild mineralization of the intrahepatic biliary tree
- Normal pancreas
