

**PATIENT**

Milo Tarud

**PRESENTING CLINICAL SIGNS**

Pet had diarrhea since this morning. Stools have not been normal for a while. Cleared up for a short while after last visit but then came back. No vomiting. Did not want to eat this morning. O gave fiber supplement in food yesterday but seems to have become worse today. Mentioned that P received Bravecto on Saturday.

**SPECIES**

K9

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

Radiographs of the abdomen in three imaging planes are provided for review.

**BREED**

Yorkshire Terrier

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

**SEX**

Male Neutered

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

**AGE**

3

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and empty.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

**HOSPITAL NAME**

DTLAvets

The colon is seen in the expected position and is mildly distended by gas and a small amount of fecal material is seen in the transverse colon.

**RADIOGRAPHIC DIAGNOSIS**

**REFERRING VET**

Dr Montoya

- Overall empty gastrointestinal tract

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The empty gastrointestinal tract is considered as a sequela to the intestinal clinical signs. There is no evidence of radiopaque foreign material, abnormal gas pattern or signs for gastrointestinal mechanical obstruction. Differentials include enteritis/gastroenteritis, dietary indiscretion, parasitic infection, dysbacteriosis, other.
